

How we work.

A deliberate, transparent route. You always know where the project stands and what happens next.

N

01 Discovery

We start by understanding the problem, not pitching a solution. We talk to the people who feel the pain, map the current state, and agree on what success actually looks like.

YOUR PART
Give us access to the right people and honest answers.

OUR PART
Ask the hard questions and document what we hear.

02 Scoping & Proposal

We turn discovery into a concrete plan: what we will build, what we deliberately will not, what it costs, and how long it takes. No padded estimates, no vague phases.

YOUR PART
Decide what matters most when trade-offs surface.

OUR PART
Commit to a scope we can actually deliver.

03 Architecture & Design

Before the build, we design the system: data models, integration points, and the interface direction. This is where expensive mistakes get caught cheaply.

YOUR PART
Review and sign off on the architecture and design direction.

OUR PART
Design for the next three years, not just the launch.

04 Build & Iterate

We build in short cycles and demo working software every week. You see real progress, not status reports, and course corrections happen while they are still cheap.

YOUR PART
Show up to weekly demos and give direct feedback.

OUR PART
Ship working increments and flag problems early.

05 Launch & Handoff

Launch is a checklist, not a ceremony. We deploy, verify, and then hand over everything your team needs to own the system: code, documentation, and operational runbooks.

YOUR PART
Confirm acceptance criteria are met before go-live.

OUR PART
A clean launch and a handoff with nothing hidden.

06 Ongoing Support

After launch, you choose the level of involvement: full support retainer, on-call advisory, or a clean goodbye. Most clients keep us close, but it is a choice, not a lock-in.

YOUR PART
Tell us the level of support that fits your team.

OUR PART
Be there when it matters, invisible when it does not.
